Professional Profile

Software Engineering student with strong experience and knowledge in software development, web applications, databases, and problem-solving. Focused on applying my technical skills to create solutions and continue growing within a dynamic, collaborative, and challenging environment.

Experience

Academic projects

Ride Management Web Application – Laravel

- Developed a web application inspired by Uber platform, with separate user roles for administrators, operators, and drivers.
- Implementation of a RESTful API using Laravel to manage users, trips, vehicles, and role-based operations.
- Development of a backend system to support trip requests, driver assignment, and administrative management.
- Integration of a frontend interface with the Laravel API to consume and display real time data.
- Implementation of role based access control for Admin, Operator, and Driver profiles.
- Use of a frontend template adapted to the system requirements and connected to backend services.

Leadership Experience

Scrum Master — University Community, 1 year

- Coordinated team activities and task distribution.
- Facilitated Scrum meetings and sprint planning.
- Supported team communication and progress tracking.
- Helped identify and resolve project blockers.

Augmented Reality Project – Unity / University Community

- I collaborated for over a year in a university community project focused on recreating Central Park in Ciudad Quesada, Alajuela, using Unity.
- Participated in the development of an augmented reality experience to present real world spaces in an interactive digital environment.
- Contributed to the creation and integration of 3D environments, assets and interactive elements within Unity.
- Worked with a discipline team to plan, test and improve the user experience of the application.
- Working on a chatbot that uses Qdrant as a vector database to search and retrieve project information

CommunityHub – Web Application

- Developed a full-stack web application using Nuxt.js and Vue.js for the frontend, Node.js and Express for the backend REST API, and MongoDB Atlas with Mongoose for data storage.
- Implemented three roles: User to explore and register for events, Organizer to create and manage events, and Administrator to manage users, categories, and platform content.
- Added JWT authentication and role-based access control.
- Integrated AWS Lambda and Amazon EventBridge to automate event reminder notifications for registered users.

Education

Técnico Profesional de Limón

Limón, Costa Rica

Bachelor of Secondary Education

2023

Universidad Tecnica Profesional

Alajuela, Costa Rica

Diploma in Information Technology

Graduated June 2026

Area of Study: Software Engineering

Skills

- Teamwork
- Leadership
- Adaptability
- Discipline
- Excellent interpersonal relationships
- Languages: Spanish, English B2

Technical Skills

- Programming & Web: Python, Java, C#, PHP, JavaScript, TypeScript, HTML5, CSS3, Vue.js, Nuxt.js, Laravel, Django, FastAPI, Node.js and Express.js
- Databases: SQL, PostgreSQL, SQL Server, MongoDB, Firebase Firestore, Qdrant.
- Cloud & Development Tools: AWS, Microsoft Azure, Git, GitHub, Docker, Postman.
